APPLICATION FOR PERMIT UNDER
POLLUTION CONTROL ACT
(Effluent)

Preamble—Existing wastewater disposal is by individual septic tanks, absorption field disposal, and other means less satisfactory. Owing to a high-water table, many examples of surfacing effluent prevail and outbreaks of disease have occurred in the recent past. The objective is to use the proposed system, consisting of a sewage-collection system and marine outfall, to provide an immediate improvement.

Oceanographic studies have been undertaken. The results indicate that marine disposal at 70-foot depth will result in rapid dilution and dispersion of dissolved effluents. The large tides and high flow of the Nass River flowing past the outfall site will ensure no build-up of effluent will occur. After the system is constructed a monitoring program is to be instituted to record the actual affects of the disposal system.

THIS APPLICATION is to be filed with the Director, Pollution Control Branch, Parliament Buildings, Victoria, B.C. Any person who qualifies as an objector under section 13 (2) of the *Pollution Control Act* may, within 30 days of the date of application, or within 30 days of the date of publication in *The British Columbia Gazette* or in a newspaper, or, where service is required, within 30 days of the serving of a copy of the application, file with the Director an objection in writing to the granting of a permit, stating the manner in which he is affected. Those who do not so qualify may file with the Pollution Control Board an objection in writing under section 13 (6), in the same manner and time period as described above.

The Superintendent General of Indian Affairs of Ottawa, Ont., hereby applies to the Director for a permit to discharge effluent from a sanitary sewer system located in the Village of Kincolith into Nass Bay, which flows west and discharges into Portland Inlet, and gives notice of application to all persons affected.

The land upon which the works are located is on the right bank of the Nass River at the mouth on Portland Inlet;

NTS 1031/13W, 103P/4W; at 55°N, 129° 57'W.

The discharge shall be located approximately 4,000 feet from shore, southwest of the Village of Kincolith.

The quantity of effluent to be discharged is as follows: Average annual daily discharge (based on operating period), 45,000 imperial gallons. Maximum daily discharge, 90,000 imperial gallons.

The operating period during which the effluent will be discharged is continuous.

The characteristics of the effluent discharged shall be equivalent to or better than total suspended solids, 260 mg/L; BOD, 260 mg/L; pH, 6.5-8.5; temperature, 5-20°C; faecal coliform, 10⁶ mpn/100 mL.

The type of treatment to be applied to the effluent before discharge is comminution.

I, J. Pousette, Administrator, hereby certify that a copy of this application has been received by the Regional District of Kitimat-Stikine.

This application, dated on October 6, 1977, was posted on the ground in accordance with the Pollution Control Regulations.
